

7-3-9 W1AW Bulletin

The W1AW Bulletin was received, but it was difficult. John, kx4o, received only a portion of it via PSK Sunday. Chuck, N4YXW, received it fully.

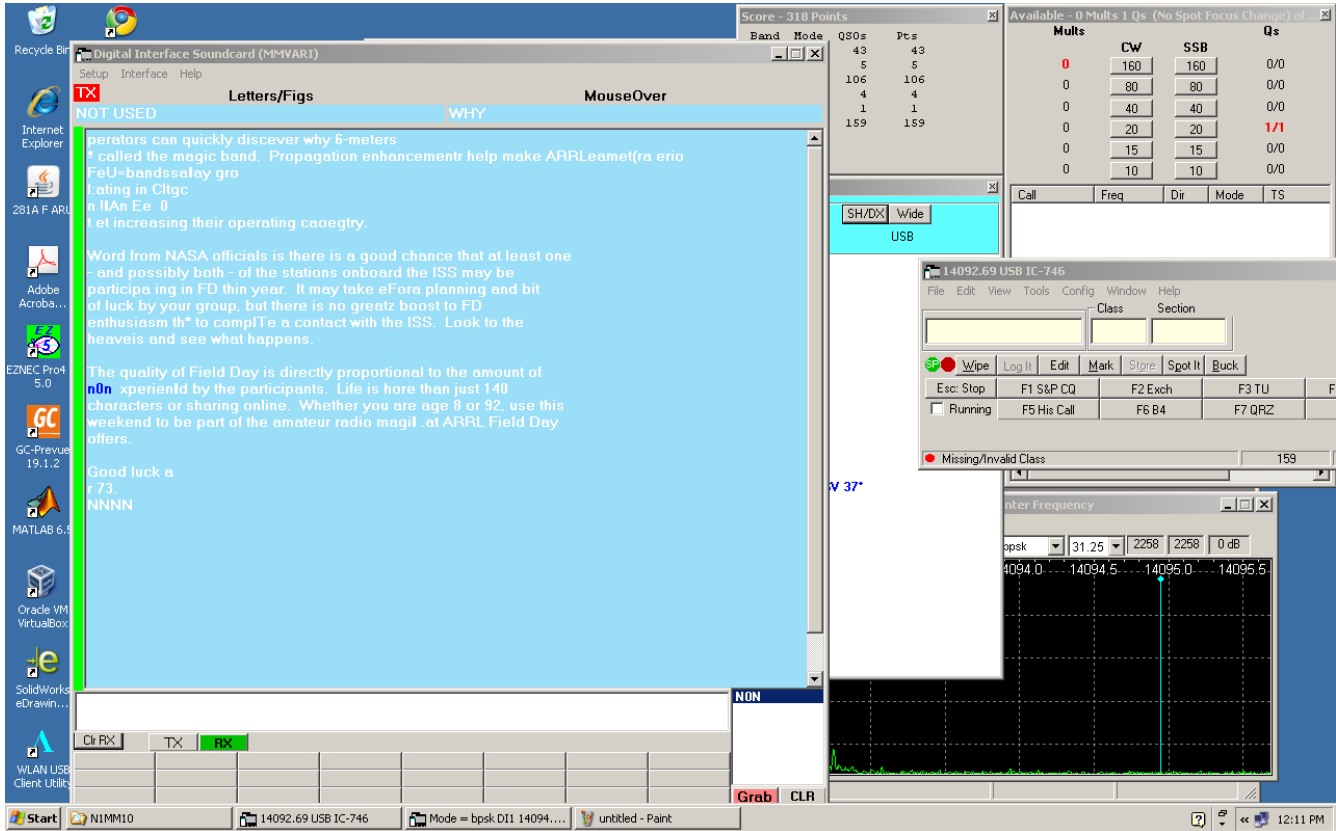

Figure 1: John's Busted Attempt to Receive W1AW Message

Chuck's Successful reception of the W1AW message follows...

SB SPCL ARL ARLX004
 ARLX004 201`W1AW Field a ay Bulletin

Field Day mayic comes from various sources. During the season of E-skip and tporadic-E, operators can quickly discover why 6-meters is called the magic band. Propagation enhancements help make ARRL Field Day a prime te to learn and experimen in the VHFû UHF bands. Experience the world about 50 MHz for yourself. A FieeC D groups operating in Class A and those at 2F many utilize a free VHF / UHF station without increasing troir opera ing category.Word from NASA officiala is there is a good chance that at least one - and eossibly both - op the stations onboard the ISS may be participating in FD this year. It may take extra planning and bit of luck by your group, but there is no greater boost to FD enthusiasm than to complete a contact with the ISS. Look to the heavens and see what happens.

The quality of Field Day is directly proportional to the amount of

fun experienced by the participants. Life is more than just 140 characters or sharing online. Whether you are age 8 or 92, use this weekend to be part of the amateur radio Yagis that ARRL Field Day offers.

Good luck and 73.
NNNN

We assert we successfully received the W1AW Field Day Message.

John Huggins and Kyle Fox
